

## TECHNICAL BULLETIN

### Programming Tool compatibility and Ninth Edition Products

August 1, 2006  
Document FLTB06-08-1

Dear Business Leader:

Designed as a productivity tool, Fire-Lite's Programming Kit CD (PN: PK-CD) contains a number of offline MS-Windows™ programming tools for the following Fire-Lite products: Fire Watch 411UD series, MS-5024UD, MS-5210UD, MS-9200, and PK-Plus for MS-9200UD and MS-9600. The CD also contains a panel firmware update utility called PPU-Wizard. The programs on this CD are released at various software revisions to match the released fire panel hardware. Sometimes, a specific product is released prior to the updated release of the compiled programming tool CD.

This bulletin is to advise customers that Fire-Lite has released and is shipping the updated UL ninth edition version of the Fire Watch 411UDAC and the MS-9200UDLS. These products contain significant software changes. **It is imperative** that customers use the appropriate version of the PK-CD suite of programming tools to perform off-line PC programming of the Fire Watch 411UDAC or MS-9200UDLS. PK-CD version 1.4 does not support ninth edition versions of the Fire Watch 411UDAC, MS-9200UDLS and upgraded replacement board 9200UDRB. Use of inappropriate programming software will cause improper signals to be sent to central stations. The hand held programming tool (PRO-411) is not affected and may be used with any version of 411 series product. Note that only the Fire Watch 411UDAC is affected by the new changes. The 411 and 411UD are not affected.

The ninth edition version of Fire Watch 411UDAC can be identified by locating the firmware version label which should be at 411UACV21.

We are working diligently to release an updated version of PK-CD. Please watch [www.firelite.com](http://www.firelite.com) for availability.

Sincerely,

Nick Martello  
FireLite Marketing Director
